

The FCC must reject the NAB's petition 04-160 because Americans deserve freedom of choice in regards to what is available to listen to over the public airwaves (including satellite transmissions)

The Governments of North Korea, Cuba and Iran restrict the choices that each countries citizens have when it comes to receive pertinent information and entertainment. Is the United States Government no different from the government of North Korea?

I depend on the XM Satellite Radio service to provide me with the latest traffic and weather in addition to many more varieties of music than is provided on FM radio.

Please let the free market determine who should win the battle for listeners ears and HANDS OFF satellite radio!

REJECT PETITION 04-160!!
